Security Statement:

We offer both onsite, as well as offsite storage media destruction to meet your strict security guidelines, or your time constrained schedule. Every piece of hardware that comes through our doors is inspected for storage media such as hard drives, server tapes, and other various types of physical storage media, which is then summarily destroyed. We offer on request certificates of destruction for all destroyed media. All items are also thoroughly inspected for any type of asset tag or indication of point of origin, and all asset tags are removed and destroyed on the spot during the check in process. We offer full indemnity on all items removed from your facilities. Through the use of our in-depth check in process you can be sure of every item that has left your facility as well as receive provisions as to where the items are headed when they leave ours. We make your security, our security.

Data Sanitization:

DoD 5220.22-M is sometimes cited as a standard for sanitization to counter data remnants. The NISPOM actually covers the entire field of government-industrial security, of which data sanitization is a very small part (about two paragraphs in a 141 page document). Furthermore, the NISPOM does not actually specify any particular method. Standards for sanitization are left up to the Cognizant Security Authority. The Defense Security Service provides a *Clearing and Sanitization Matrix (C&SM)* which does specify methods. As of the June 2007 edition of the DSS C&SM, **overwriting is no longer acceptable for sanitization of magnetic media;** only degaussing or **physical destruction** is acceptable

Total Drives Destroyed:

This document certifies that the hard drives listed here were physically destroyed by
Computer Crusher Recycling Company on the date listed below.

01/01/2013

A handwritten signature in black ink that reads "Donald Hammett".
